

AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph starting on page 11, at line 20 with the following amended paragraph:

With reference to FIGURE 6, a light source **100** includes a light emitting semiconductor device **112**, a supporting substrate **114**, a curved half-parabola reflector **116** that together with the supporting substrate **114** defines an opening or light aperture **118**, and an optional encapsulant **120** filling a space between the supporting substrate **114** and the curved reflector **116** which are similar to correspondingly named elements of the light source **10** shown in FIGURES 1 and 2. The encapsulant **120** includes a curved surface **122** that comports with the curved reflector **116**, and a substantially planar light-transmissive surface **124** that fills the opening or light aperture **118**. The curved half-parabola reflector **116** defines an optical or parabola axis **126** that coincides with a substantially planar reflective surface **128** of the support substrate **114**.
